

Procedure:

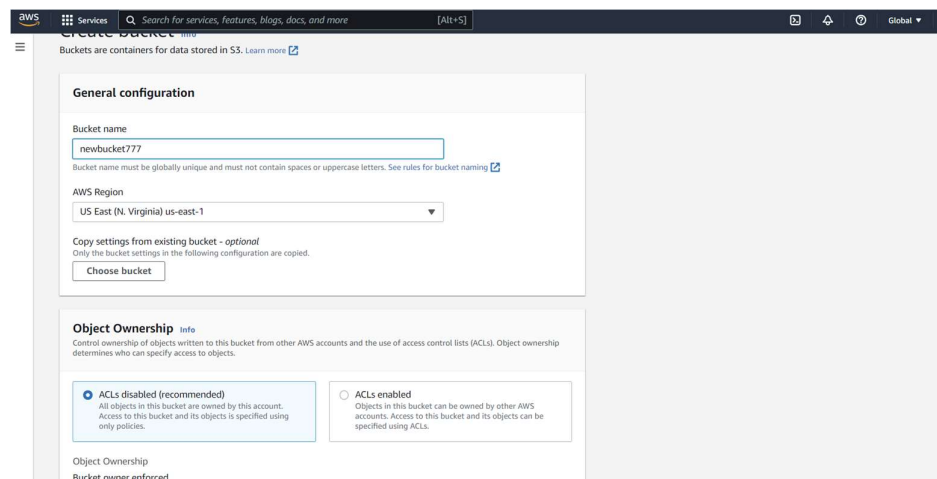

1. Go to AWS Services- Under Storage service click on S3

2. Following page will appear- Click on Create Bucket

3. Fill in the following details -Bucket name if you want to use existing bucket then choose bucket

S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.

☒ Block public and cross-account access to buckets and objects through any public bucket or access point policies

S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

Bucket Versioning

Versioning is a means of keeping multiple variants of an object in the same bucket. You can use versioning to preserve, retrieve, and restore every version of every object stored in your Amazon S3 bucket. With versioning, you can easily recover from both unintended user actions and application failures. [Learn more](#)

Bucket Versioning

☒ Disable

☐ Enable

Tags (0) - optional

Track storage cost or other criteria by tagging your bucket. [Learn more](#)

No tags associated with this bucket.

[Add tag](#)

Default encryption

Automatically encrypt new objects stored in this bucket. [Learn more](#)

4. Keep all the things by default and click on Create Bucket

Tags (0) - optional
